

# Multiple Wood Using Systems at One Location Webinar

Thursday April 23, 2009  
10:00AM EST/9:00AM CT

## Overview

This webinar will focus on describing a project that was funded by the USFS Wood Education and Resource Center and CleanTech Partners to conduct pre-feasibility studies for 15 sites, with wood energy products being the major emphasis. On 13 of the 15 sites, wood pellet plants would be the initial systems installed. As these wood pellet plants become profitable, other systems will be assessed to be implemented as tandem processes. The other two sites assessed are existing sawmills that would have wood pellet production systems added to their existing operations.

## Purpose

This webinar will primarily describe all aspects of the pre-feasibility studies conducted, including:

- Raw Material
- Permitting
- Financing
- Markets

Additionally, ownership, structure, site location, site size, site access, and other feasibility factors will be discussed.

## Additional Information

Don Peterson, Executive Director of Timber Ridge Energy Enterprises, Inc. (TREE) will be the presenter.
